Open to relocate | Visa sponsorship required

Professional Summary

Senior Data Scientist, with 6+ years taking GenAI and ML solutions from early experimentation to production-grade systems embedded in real business processes. Specialised in **agentic AI, RAG pipelines, LLMOps, and applied machine learning**, with a track record of measurable results (30–70% improvements in cost, efficiency, and accuracy) across telecom, healthcare, fintech-adjacent, and recruitment domains. Direct, evidence-led communicator who enjoys cross-functional ownership from requirements to production monitoring. Recent roles were short-term contract and remote engagements by design; I am now looking to settle into a **permanent, on-site or hybrid** position where I can grow with one team long-term.

Outside of work: keen cyclist, hiker, and camper who enjoys outdoor and adventure activities.

Professional Experience

Senior Data Scientist

Nov 2025 – Present

MCI R&I Center (Full-time, On-site) Brought GenAI from pilot to production in a large-scale enterprise telecom environment:

- **Voice-to-Voice AI Call Centre Agent**
 - **Challenge:** Call centre operations relied on manual human agents for high call volumes.
 - **Contribution:** Designed and shipped a voice-to-voice **AI Call Centre Agent** end-to-end with LangGraph, combining real-time speech (ASR/TTS), RAG-based knowledge retrieval, intent detection, and CRM/ticketing API integration.
 - **Impact:** Replaced human call-centre operations in production, supporting **100+ concurrent conversations**.
- **Model-Pool Backend & Latency Optimisation**
 - **Challenge:** Model serving latency limited scale.
 - **Contribution:** Built a model-pool backend (ASR, LLM, TTS) with Nginx load balancing and routing.
 - **Impact:** Cut latency by **70%** while sustaining production load.
- **LLMOps Observability**
 - **Challenge:** No visibility into agent/model behaviour in production.
 - **Contribution:** Implemented **LLMOps observability** with Prometheus and Grafana.
 - **Impact:** Real-time monitoring of agent quality, prompt performance, and system health.
- **Network Anomaly Detection & Root-Cause Analysis**
 - **Challenge:** Network faults took days to diagnose.
 - **Contribution:** Developed a time-series agentic AI system for anomaly detection and root-cause analysis, integrating agents with internal analytics APIs.
 - **Impact:** Reduced MTTR to **under 1 hour** and cut manual anomaly identification time by **4x**.

Data Scientist

May 2025 – Nov 2025

Robin — Utrecht, Netherlands (Contract, Remote) Delivered GenAI solutions from business requirement to production for a Dutch fintech-adjacent recruitment platform:

- **Conversational AI Chatbot**
 - **Challenge:** Recruiters needed a conversational way to find matching candidates.
 - **Contribution:** Built a conversational AI chatbot backend (Django REST + OpenAI API) integrated with Vespa.ai and Elasticsearch.
 - **Impact:** Increased recruiter data completeness by **70%**.
- **Privacy-by-Design Data Architecture**
 - **Challenge:** Candidate PII needed to stay protected across the pipeline.
 - **Contribution:** Designed a privacy-by-design data architecture, anonymising CVs and separating identity resolution from the matching layer.
 - **Impact:** Zero data leakage across the conversational and matching pipeline.

- **Hybrid Search for CV-to-Job Matching**
 - **Challenge:** CV-to-job ranking relevance was underperforming.
 - **Contribution:** Built hybrid search on Elasticsearch and Vespa.ai.
 - **Impact:** Improved ranking relevance by **33%**.
 - **Personalised Recommendation Engine**
 - **Challenge:** Candidate recommendations lacked personalisation.
 - **Contribution:** Architected a recommendation engine on Vespa.ai with embedding pipelines.
 - **Impact:** **50% relevance improvement**, 70% preference prediction accuracy.
-

Data Scientist

Feb 2025 – May 2025

Procycons — Frankfurt, Germany (Project, Remote) Built responsible AI pipelines for automated ESG compliance in a regulated financial reporting context:

- **ESG Structured Information Extraction**
 - **Challenge:** ESG reports required manual, slow extraction of structured data.
 - **Contribution:** Built a custom parsing and structured information extraction pipeline using NLP and table-detection models.
 - **Impact:** Achieved **90%+ accuracy** on complex ESG reports.
 - **Regulatory-Grade Workflow Orchestration**
 - **Challenge:** Regulatory use demanded auditable, reliable processing.
 - **Contribution:** Orchestrated document workflows with Temporal.io and applied prompt optimisation with output validation.
 - **Impact:** Delivered compliance-grade reliability for regulatory review.
-

Data Scientist — Healthcare AI

Sep 2023 – Oct 2024

Eastern Pharmaceutical Group Pty Ltd — Sydney, Australia (Full-time, Remote) Led a 3-person team building EviPackAI, a production RAG platform for clinical evidence document generation:

- **End-to-End RAG Pipeline (EviPackAI)**
 - **Challenge:** Evidence packages for complementary medicine took weeks to compile manually.
 - **Contribution:** Designed an end-to-end RAG pipeline: curated golden-source medical literature, built and managed a vector database, and set up retrieval evaluation frameworks.
 - **Impact:** Cut turnaround from 1.5 months to **30 minutes** and reduced cost by **AUD 5,000 per document**.
 - **Clinical-Grade Output Guardrails**
 - **Challenge:** Clinical-grade output quality was non-negotiable.
 - **Contribution:** Implemented guardrails and output validation against clinical evidence standards.
 - **Impact:** Sustained **95%+ retrieval accuracy** in production.
-

Data Scientist

Oct 2024 – May 2025

MCI R&I Center (Full-time, On-site)

- **Autonomous Network Big-Data Infrastructure**
 - **Challenge:** Network operations data was fragmented across systems.
 - **Contribution:** Architected big-data infrastructure for autonomous network operations hosting and deployed ML anomaly-detection models.
 - **Impact:** Reduced manual anomaly identification time by **4x** at cell level.
-

Data Scientist

Nov 2021 – Sep 2023

Rightel (Part-time, Remote)

- **ML-Driven Anomaly Detection (UMTS/LTE)**
 - **Challenge:** UMTS/LTE network issues were identified reactively.
 - **Contribution:** Designed and deployed ML-driven anomaly detection with automated KPI extraction pipelines.

- **Impact:** Cut network downtime to **23% of previous levels** and MTTR from days to **under 8 hours**, freeing **10 staff** from repetitive tasks.

■ Technical Skills

GenAI & LLMOps: LLMs · RAG · Agentic AI · LangChain · LangGraph · Prompt Engineering & Optimisation · Agent Evaluation · Guardrails · MLflow

Machine Learning: Anomaly Detection · Time-Series Forecasting · Recommendation Systems · NER · Structured Information Extraction

Frameworks & Libraries: PyTorch · TensorFlow · Keras · HuggingFace · FastAPI · Django REST

GenAI Platforms: OpenAI API · Claude (Anthropic) · Google Gemini · Mistral · HuggingFace Hub

Data & Analytics: Python · SQL · Pandas · Power BI · Matplotlib

Information Retrieval: Elasticsearch · Vespa.ai · Qdrant · Vector Search · Hybrid Search · Embedding Pipelines

Infrastructure & MLOps: Docker · Kubernetes · Prometheus · Grafana · Loki · CI/CD · GCP · AWS

Databases: PostgreSQL · TimescaleDB · Elasticsearch · Qdrant

Collaboration: Agile/Scrum · Jira · Git · Stakeholder Communication

Languages: English (Fluent) · Persian (Native) · Dutch (Learning)

📁 Personal Projects

Self-Hosted Agentic AI Platform with Full LLMOps Stack

- **Self-Hosted Agentic AI Platform**
 - **Challenge:** Wanted a reference architecture for production conversational AI outside a corporate stack.
 - **Contribution:** Designed on-premise infrastructure with self-hosted LLMs, ASR, TTS, and a multi-agent orchestration framework (resource manager, router, tool registry), with Qdrant, Flowise, AnythingLLM, and Prometheus/Grafana.
 - **Impact:** A fully working, reproducible self-hosted GenAI reference stack.

Conversational KPI & Data Intelligence Agent

- **Conversational KPI Agent**
 - **Challenge:** Stakeholders needed KPI answers without writing SQL.
 - **Contribution:** Built an agent translating natural language into SQL-based KPI lookups and structured reports, with Power BI visualisation.
 - **Impact:** Self-service KPI access for non-technical stakeholders.

🎓 Education

M.Sc. Telecommunications Engineering

Malek Ashtar University of Technology

2013

B.Sc. Telecommunications Engineering

Urmia University

2010
